I published the STL file on Thingiverse at the following URL: Thingiverse.com I created this simple driver for drill as a tool while manufacturing an eggbeater style antenna for amateur radio and meteorological satellite work. The antenna design is not mine and can be found using the following ... I am new to Thingiverse, so there could be a delay of 1 day before my first "thing" is made public. 2 I like to try Thingiverse.com. They host the correlated 3D print files for free. Bob KD8CGH thanks Bob (KD8CGH), good idea! Bob Ko2f I like Ko2f: Oops ... it seems that you cannot attach a STL file here. I posted the STL file on Thingiverse at the following URL: I'm sorry not to have caught it before. STL attachments are now admitted to the forums! 1 As if I were interested in building one for work on Saturday. I thought it would be a good first antenna to build and learn. Antenna Test Lab presents the following software to display the measured 3D antenna models, RHCSP Spirale 4nec2 We collaborated with Arte Voors, the author of the simulator of very popular antennas called "4NEC2". Our customers can use this antenna simulation software, but above all, has been updated to allow the plot of our 3D measured spherical test data. Following these steps will help you install this free software 4NEC2 on your PC. Step by Step (1) Download the latest version 4NEC2 from HERE, under Download = > "Last version 4nec2" (do not choose the "not install version"). (2) Install it (remove the folder) on your PC at any desired location, and note this location. (3) The complete user manual is "4Nec2.rtf", and isin the same installed folder; We have pdf qui 3d viewer manual quiphull

quiiipull extract Manual here (4) The first time you perform 4nec2, you will be asked to load a model, and can be loaded in the /Models folder (you can load any of the examples included, and the model is not used). (5) Download and arouse this zipped file to try one of our 3D plot files (use 850 MHz), unless you have the results from us already. (6) To import 3D data on the 4nec2 viewer, just select Main> File> File Data import> Complete / 3D data (*.Txt) from the main menu ... then switch to TXT plot files. (7) If your imported data set contains more than a frequency, you will be asked to type in a frequency (in MHz). It is always possible to use "Notepad" or any other text editor to examine the *.txt file and see which frequencies contains. (8) You will see a 2D polar graph by default, then select Main (F2): Window> 3D Viewer (F9) to open the 3D viewer window. The spherical model is hidden by default, and can be enabled by changing the drop-down menu from à € œHide patternâ € to à € œmults colorâ € . (9) Continuing: explore antenna test techniques and terminology in our educational section. Manager - Na4Mammanager notes
